Titan Trade Club is a decentralized club, whose proposal is to provide our members the education on the trade and mining market of crypto-coins.

Each member of the club is responsible for maintaining the integrity of the business rules, benefiting from the continued growth of the group, reaching a new financial and personal condition.
Cripto coins

Crypto-currency is a digital currency that uses encryption to keep it secure. Like the printed coin that has serial numbers or stripes hidden inside to prevent forgery, the cryptocoins uses codes that are very difficult to break.
TRADE is nothing more than the purchase and sale of digital coins, as it happens in the Stock Exchanges. The exchanges are made through online platforms, known as exchange houses. And they can also be done directly between people. Like any other type of money, crypto-currency is used to exchange goods and services.
How it works

The Bitcoins mining system is managed by specific software. Therefore, to mine it is necessary to download it on the computer to be part of a network interconnected with other computers that are part of the bitcoin network, similar to torrent. After that, the person can now connect to a group of other miners, called pool, that group together processing power, or mine alone.

Many computers in these entities serve as "nodes" of the system and are responsible for controlling it, validating information, and ensuring security in exchange of currency-related data.

In this way, the Bitcoin market can operate independently of a central "node", that is, in a peer to peer system without the need of an organization that regulates and controls its quotation, emission and other activities related to it.
